Credit Highlights

- S&P Global Ratings' issuer credit rating (ICR) on California Community Reinvestment Corp. (CCRC) is 'A+'.
- The outlook is stable.

Security

An ICR reflects the obligor's general creditworthiness and its capacity and willingness to meet financial commitments when they come due. It does not apply to any specific financial obligation and does not consider the obligation's nature and provisions, bankruptcy standing, liquidation, statutory preferences, or legality and enforceability.

Credit overview

CCRC is a 501(c)(3) corporation in Glendale, Calif., that was certified as a Community Development Financial Institution (CDFI) by the U.S. Department of the Treasury in 1996. CCRC was founded in 1989 with support from the Federal Reserve Bank of San Francisco and major banks throughout California for the purpose of providing financing and technical assistance to facilitate the development of affordable housing in the State of California. The corporation's primary function and mission is to be a lender of permanent mortgages to developers of to-be-constructed or rehabbed low-income housing tax credit (LIHTC) properties throughout California. CCRC's mission and its vision to become the premier provider of capital serving the needs of low-income residents and communities are achieved through adhering to a proven business model, detailed multiyear strategic plan, and meeting key goals established by an experienced senior management team and an involved board of directors.

CCRC's business model has historically been to build up a portfolio of high-quality, permanent multifamily loans and then securitize a large portion of those loans, generating substantial one-time revenues and cash from the sale, and then using that capital to rebuild the loan portfolio again. This has proven to be an effective way to grow the business--essentially tripling in size over the past six years--while supporting its social purpose. Management's strategic plan includes continuing to follow this model when market conditions are favorable to do so, while simultaneously building its on-balance-sheet loan business to generate annuity revenues from the high-quality, high performing loan portfolio. Following this cyclical model of building up and then selling off-balance-sheet assets results in the appearance of extremely volatile performance, but, in our view, intentional and monitored volatility resulting from a thought-out and proven strategy in a very different light than unintentional performance-related volatility. We recognize there are certain risks associated with this model related to forecasting and analyzing ongoing performance and have considered these risks in our assumptions and credit analysis. We believe this risk to be largely mitigated by management's expertise, proven track record, and extremely close monitoring of funding and lending of the business.

As part of the lending model, CCRC enters forward commitments where the terms of the permanent loan are locked in during the construction and conversion phase. Once all requirements are met, CCRC will fund the permanent loan according to the forward commitment terms. This model could expose CCRC to interest-rate risk, especially in a rising-interest-rate environment, like the one we are currently experiencing. However, in our view, management's extensive understanding and diligent monitoring of economic and market conditions as well as its prudent oversight of the on-balance-sheet loan portfolio, in the context of forward commitments that are expected to be converted to on-balance-sheet permanent loans, greatly mitigate the presence of this risk. Management has several strategies and tools, including the business model itself as it pertains to timing of funding and rate setting, to help protect the corporation's financial position against sharp rises in interest rates.

The ICR reflects our view of CCRC's:

- Financial strength measured by five-year average S&P Global Ratings-calculated net equity (which is net assets adjusted to remove fair value reporting and stressed losses)-to-total assets ratio of 24.4% for fiscal years 2019 through 2023, which we consider very strong compared with that of similarly rated peers and to criteria benchmarks for the rating category.
- Very strong and above-benchmark profitability metrics as measured by five-year (fiscal years 2019-2023) average net interest margin (NIM) of 1.6%, partially offset by a more volatile, albeit very strong average return on average assets (ROA) due to the cyclicality of the business model.
- Very strong asset quality characterized by zero nonperforming assets (NPAs) or delinquencies of any kind over at least the past eight fiscal periods (2016 through 2023) and a loan portfolio underwritten according to a thorough and stringent credit policy.
- Extremely strong management and governance assessment based on the experience, expertise, sector knowledge, and proficiency of the corporation's senior management team as well as based on a detailed multiyear strategic plan and substantive operational and financial policies and procedures that, among other things, guide operations, set performance standards, and monitor loan portfolio underwriting and reviews.
- Relatively high year-over-year volatility in key financial metrics compared with that of peers and industry standards.
- Interest rate exposure related to forward commitments that are instrumental to the corporation's business model.

Environmental, social, and governance

We have analyzed CCRC's environmental, social, and governance (ESG) factors relative to its financial strength, management, federal designation, and local economy. In our opinion, the ICR exhibits opportunities related to social capital. Housing Trust's mission to use transformative housing finance and public and private partnerships to create more equitable and affordable communities aims to address socioeconomic inequities affecting demographic and income trends considered in the rating. The rating also incorporates the elevated physical risks for California given its exposure to various climate-related events such as wildfires and drought, and natural disasters such as earthquakes, which can affect the state's economy and disrupt population migration. However, we believe CCRC's financial strength, strong underwriting guidelines, and insurance requirements mitigate these risks. We view governance factors as neutral in our credit rating analysis.

Outlook

The stable outlook reflects our view that CCRC's financial and operational performance will remain consistent with the current rating during at least the two-year outlook period. In our view, at the current rating the corporation can absorb material changes in its balance-sheet size and volatility in key metrics that are expected during the building up of its loan portfolio and subsequent sale of certain loans. Should CCRC increase its on-balance-sheet, annuity loan portfolio, we expect metrics and ratios will become less volatile and will normalize within the 'A' category ranges further supporting the stable outlook.

Downside scenario

Should CCRC's financial strength, as evidenced by average capital adequacy and profitability ratios and loan performance, deteriorate to levels that are no longer commensurate with the current rating and compared with those of peers, we could take a negative rating action on the ICR. Furthermore, should exposure to interest-rate risk associated with forward-commitment contracts have a negative impact on the corporation's financial position and our view of CCRC's overall credit quality, we could take a negative rating action.

Upside scenario

Conversely, should CCRC's financial strength, as reflected by equity balances, capital adequacy ratios, and profitability metrics improve to and sustain, on average, through business cycles and when incorporating management's forward-looking plans and utilization of equity balances, at levels commensurate with those of a higher rating according to our criteria and compared with that of peers while maintaining very high asset quality and extremely strong management and governance we could take a positive rating action.

Credit Opinion

Financial Strength

Capital adequacy

We view CCRC's capital adequacy to be very strong according to five-year average metrics for fiscal years 2019 through 2023, specifically net equity-to-total assets ratio of 24.4%. Following the November 2020 securitization--the largest and most lucrative in the corporation's history--CCRC's capital adequacy ratios shot up to levels well above those of similarly rated peers and compared with criteria benchmarks. While this improvement was anticipated and factored into our analysis, it is a notable and material increase from the 9.9% five-year average for fiscal years 2016 through 2020 and we anticipate both the annual and especially the rolling five-year average will remain well above the 10% criteria benchmark for the 'A' category.

Over the past six years, CCRC's net equity improved in a rolling-upward manner due to the corporation's business model of building up its on-balance-sheet loan portfolio and then securitizing and selling the loans every few years. In our opinion, this managed trend of intentional volatility is not a weakness but represents a proven and well-executed business model that better positions CCRC to capitalize on increased resources following loan securitizations and

provide funding to originate new loans. In addition, the building of wealth through this model has allowed CCRC to expand its ability to originate on-balance-sheet loans that will generate annuity revenues over time.

Chart 1

Also reflecting the corporation's business model, debt levels will fluctuate following balance-sheet build-up and sell-off cycles. To that end, following the November 2020 loan securitization, CCRC paid down a significant portion of the debt that was related to the loans sold and reports debt outstanding of $79.5 million as of Sept. 30, 2021, a 65% reduction from fiscal 2020. As CCRC has built its balance sheet up again, both loans and debt have materially increased through fiscal 2023, reaching $192 million in gross loans and $159.7 million in debt, a 33% and 28% increase, respectively, from fiscal 2022 (chart 2).

CCRC's on-balance-sheet debt balances follow the same two-to-three-year cyclical pattern of building up and then being materially reduced when the corporation's loan portfolio grows and is then securitized. In the audited financial statements, once there is a concrete plan to conduct a sale with an identified pool of loans those loans are classified as loans-held-for sale, a line item under real estate loans. For our analysis, however, we include loans-held-for-sale as short-term assets rather than as real estate loans, as they are reported in the audit, because they will generate immediate revenues and liquidity in the short term as opposed to generating annuity revenues associated with on-balance-sheet loan portfolios This classification results in a reduction of on-balance-sheet loans in our analysis before the commensurate reduction of related debt. This mismatch between loans and debt materializes immediately preceding loan securitizations (see fiscal 2020 loan-to-debt in chart 2). Proceeds from the loan sales are used to pay down related borrowing and then to supplement new borrowings to fund new loans from the corporation's forward-commitment pipeline and begin the cycle again.

Profitability

We view CCRC's five-year average profitability metrics as very strong and above average compared with those of peers and criteria benchmarks for the rating category, somewhat offset by the year-over-year volatility of the metrics. The corporation's five-year average ROA is 4.5% for fiscal years 2019 through 2023 (chart 3), with a high of 20.3% in fiscal 2021 and a low of negative 0.9% in fiscal 2019. As with many of the corporation's financial metrics, profitability saw a huge jump in fiscal 2021 due to one-time revenues from the loan securitization early in the period. As expected, net income and related metrics dropped precipitously in fiscal 2022, with both ROA and net income again being negative. However, the profitability metric trend reversed in fiscal 2023 with ROA reaching 1.8% and NIM an all-time high of 2.4%, without the boost from loan securitization, but rather improved interest earnings on loans and investments held on the balance sheet. The corporation's most stable profitability metric is NIM, averaging 1.6% during the five-year period fiscal 2019 through 2023. Stable and increasing NIM indicates that even as net income fluctuates through business cycles the spread earned on the loan portfolio is reliably strong and positive.

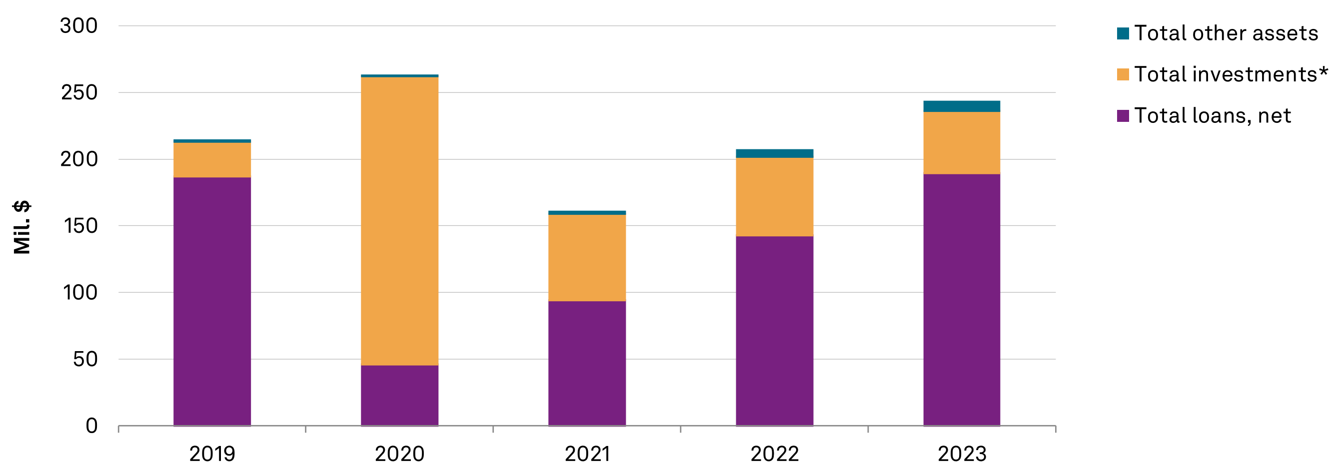
Asset quality

We view CCRC's asset quality to be very strong compared with that of peers and according to our criteria. The corporation's total assets, excluding cumulative effects of fair value accounting, increased 17.5% in fiscal 2023 from fiscal 2022 reaching $242.8 million, up from $206.7 million in fiscal 2022 and materially higher than the $160.7 million in fiscal 2021 (chart 4). Again, this cyclicality is expected and in line with CCRC's business model and is not volatility related to performance or access to capital, nor is the fluctuation in assets a reflection in shifting demand for the affordable housing loans the corporation provides. Therefore, we do not view this oscillation in total assets as a negative credit factor. The increases in 2023 and 2022 reflect the corporation's initiative to rebuild its loan portfolio following the November 2020 selloff. Affordable multifamily housing loans totaled $192 million in fiscal 2023, up 30.5% from fiscal 2022 and up from $50.3 million following the 2021 selloff. Even after securitization cycles loans typically comprise the majority of the corporation's assets averaging between 70% and 90% of the total asset balance year over year, except in years where loans held for sale are reported as investments.

Chart 4



*Includes loans-held-for-sale. Source: S&P Global Ratings.

Excluding loans-held-for-sale, cash and investment securities make up the balance of total investments year over year. Investment securities consist of interest-only strips guaranteed by Freddie Mac and nonguaranteed subordinate Freddie Mac certificates. The balances of interest-only strips and certificates were $7.6 million and $6.5 million, respectively in fiscal 2023. In addition, the corporation holds approximately $13.0 million in pledged Freddie Mac A certificates, down from $14.2 million the previous year.

We view the quality of the corporation's on-balance-sheet loans as very high, underwritten in accordance with a stringent and thorough credit policy, and to be a loan portfolio that is generally lower risk compared with that of peers based on several characteristics included low loan-to-value, very high occupancy, generally strong coverage ratios, and additional oversight provided by LIHTC investors. In addition to stringent underwriting practices that result in only higher-quality loans ever making it to CCRC's balance sheet, management diligently oversees and monitors the underlying loans, including conducting at least one loan review report on every loan serviced annually--assigning and updating risk ratings on every loan, and authoring a detailed annual loan portfolio analysis. In addition, all CCRC's loans are permanent multifamily affordable housing loans, which contrasts with many peer CDFIs that often have material portions of construction, predevelopment, and non-housing loans, which we view as higher-risk assets, in their loan portfolios. As a reflection of CCRC's high-quality and lower-risk loan portfolio, the corporation reported no NPAs or delinquencies in fiscal 2023 or the several preceding periods. The corporation has only had three loss events in its mortgage history, the most recent occurring more than 19 years ago. As further evidence of asset quality, CCRC investors have never incurred a principal loss on any of its mortgage loans.

Liquidity

CCRC, in our view, has strong liquidity to cover short-term financial needs and investment guidelines that support maximizing returns while monitoring risk and maintaining careful stewardship of corporate assets. We consider

asset-liability management a primary mitigant of liquidity risk, as the balance sheets of most CDFIs consist of long-term obligations with maturity dates that are structured to match the maturities of long-term assets. CCRC, however, has a proven business model where long-term assets can be monetized quickly should that become necessary. The corporation's easiest path to liquidity is to transfer self-funded loans to the bank pool, which frees up corporation cash. As of fiscal year-end Sept. 30, 2023, CCRC had approximately $45.5 million in cash, cash equivalents, and short-term investments (including the $13 million in pledged Freddie Mac A certificates), representing approximately 19.2% of total assets. Furthermore, CCRC's balance-sheet loans totaled approximately $192 million ($28 million of which are CCRC self-funded loans), or 78% of total assets and 115% of total liabilities, for the same period, which we view to be a very strong liquidity position. On an ongoing basis, the business model, as discussed, typically follows a two-to-three-year cycle that generates substantial liquidity when loans are securitized. Should there be liquidity needs in between these cycles CCRC can use the robust secondary market it established throughout the years to generate cash from the sale of long-dated assets. We also view CCRC's access to external liquidity sources and capital markets as strong.

In our opinion, the corporation's liquidity and equity positions in the near term could be affected by interest rate exposure related to the forward-commitment pipeline. However, the business model, where the funding of loans in the forward-commitment pipeline and the setting of rates on those loans are matched to the current interest rate environment, largely protects CCRC from material exposure and mitigates this risk during rising-interest-rate environments.

Management

We view CCRC's management as extremely strong due to its experienced, knowledgeable, and proactive senior leadership and board members. The corporation is governed by a 15-member board consisting of industry and community leaders throughout the State of California and CCRC's president. Senior management consists of a president/CEO, executive vice president, and risk officer with substantial industry experience and expertise. The autonomy and stability of the management team strongly supports and facilitates day-to-day and ongoing operations that serve the corporation's mission, address the needs of the citizens it serves, and creates financial stability and viability. In our opinion, the corporation's relationship with the state government and other jurisdictional bodies is strong given the state's historical support of affordable housing initiatives and CCRC's track record of successfully navigating the political landscape for several decades. We consider management's ability to resolve difficult situations during its operating history as very strong.

We view the corporation's strategic plan, operational and financial policies and procedures, and general oversight, involvement with, and management of the organization to be very strong and above-average compared with those of peers. In our view, the corporation's guiding documents, plans, policies, and reports are the foundation for and a key factor in the historical and ongoing success of the corporation. Overall, we view CCRC as exhibiting extremely strong organizational, administrative, financial management, and strategic planning capabilities and as maintaining a strong governance structure.
